

LINUXUS LEGACY. TAKE YOUR PEACE OF MIND TO THE NEXT LEVEL.

Owners of legacy aircraft can now acquire the benefits of LinuxUs Flight Data Monitoring (FDM) by retrofitting their aircraft with the *LinuxUs* Legacy hardware. *LinuxUs* Legacy records flight data and at the end of each flight, automatically transmits that data to a selected Flight Operations Quality Assurance (FOQA) provider.

- Stores and transmits vital aircraft data
- Potentially reduces or eliminates diagnostic flights
- Maximizes operational efficiencies
- Identifies and reduces risks
- Allows transfer of data to customer selected FOQA service providers
- Enhances awareness of aircraft performance

For more information, contact Tom Heck at
TLHeck@txtav.com, or 407-816-6907.
